

Enabling Compatibility View on IE9

There are two ways to enable the compatibility view in Internet Explorer 9. Please follow one of the simple steps described below:

Option 1:

After opening any web page, click the compatibility icon, located in the address bar. This icon appears as a white, broken page when compatibility is not enabled.

Click on the icon and it will turn blue, indicating that compatibility is now enabled.

Option 2:

Click on Tools and select Compatibility View Settings. The compatibility view is now enabled.
